SKU	Designation	French Law	MSRP
LE127	Lee Auto Bench Prime #90700	Vente libre	67.00 € incl. tax

Lee's Auto Bench Prime is the easiest and most convenient bench-mount auto primer ever!

Its symmetrical design allows it to be easily used with both the right and left hand. Only a minimum of effort, finger pressure, will be necessary to overcome all baits, even the hardest! Thanks to this precision mechanism, you will feel the primer take its place entirely in the primer housing.

The Lee Auto Bench Prime revolutionizes case priming, providing a complete solution for small and large primers. Designed with a transparent polyester housing, it allows easy visualization of the process: easily observe the smooth transfer of primers from the tray to the primer housing. In seconds, change the size of the primers or the socket holder without any hassle.

The set includes an innovative tray that integrates with the bait box in an instant. Thanks to its "built-in-primer flipping" function, the tray fills directly from even the largest primer boxes, thus considerably simplifying the process.

The mounting holes are intelligently spaced for quick attachment to the Lee Bench Plate or directly to your workbench. This device uses special but economical socket holders, eliminating the constant need for changing socket holders for priming.

Compatible with the same primer holders as the Lee Auto Prime and Lee Auto Prime XR, it offers remarkable versatility. It can be used manually or mounted on the Lee Bench Plate (optional), eliminating the need to remove the bushing holder from the press with each change.

An effective tool that requires little effort to provide remarkable efficiency in the priming process.
